

Careers in Biomedical Research

Pharmacologist

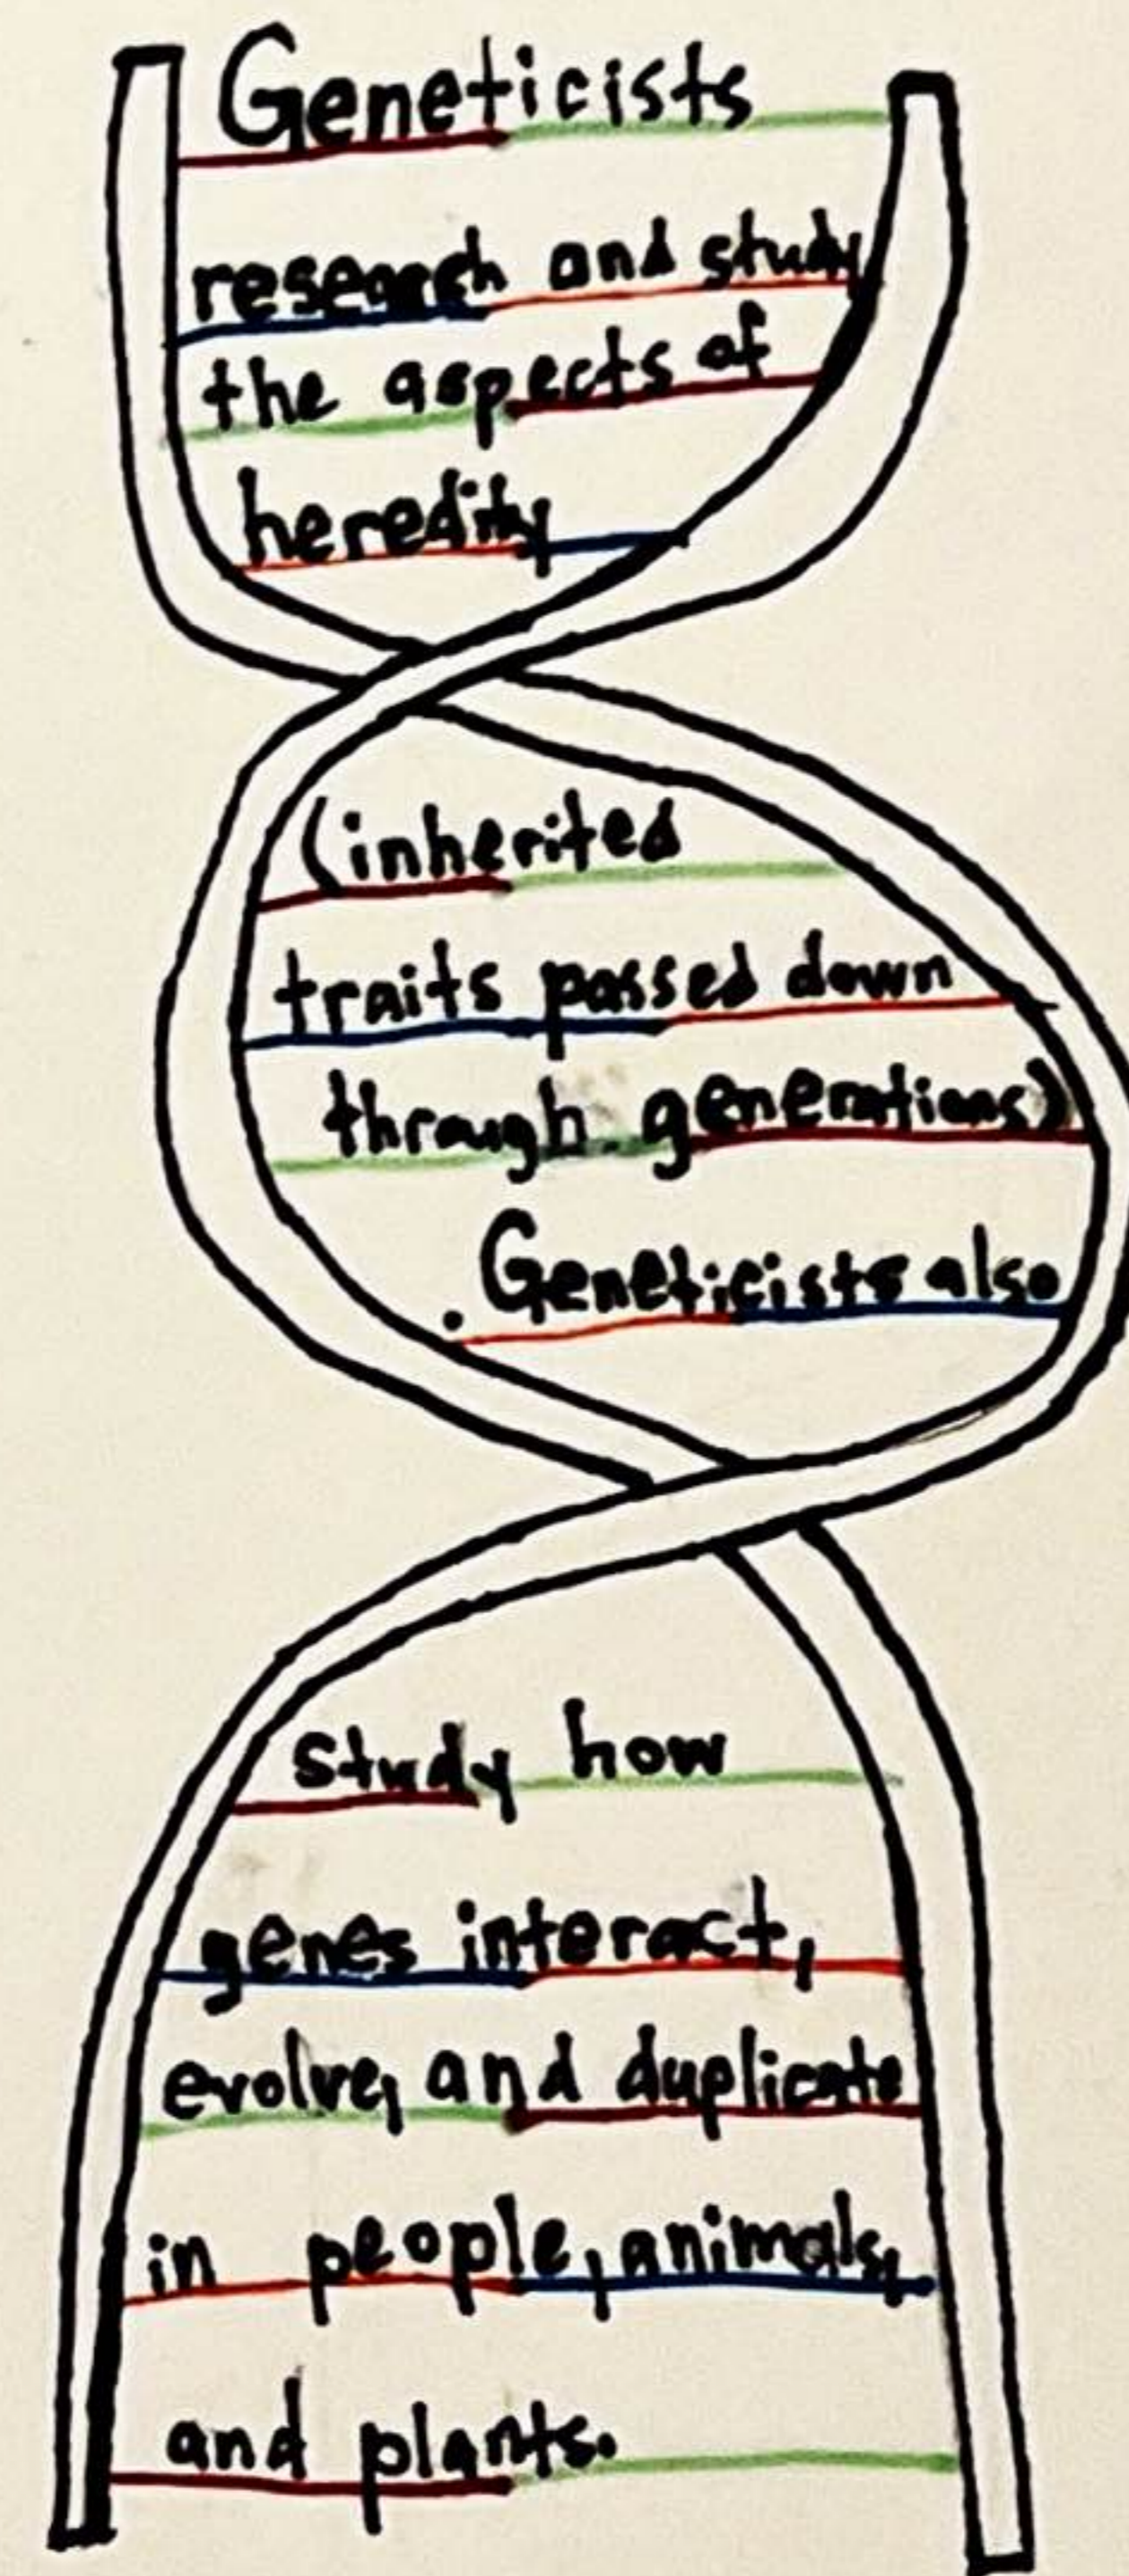

Pharmacologists carry out research to understand how medicines and treatments affect living systems. Pharmacologists are also responsible for developing treatments, improving their effectiveness, and uncovering possible side effects.

Research Chemist

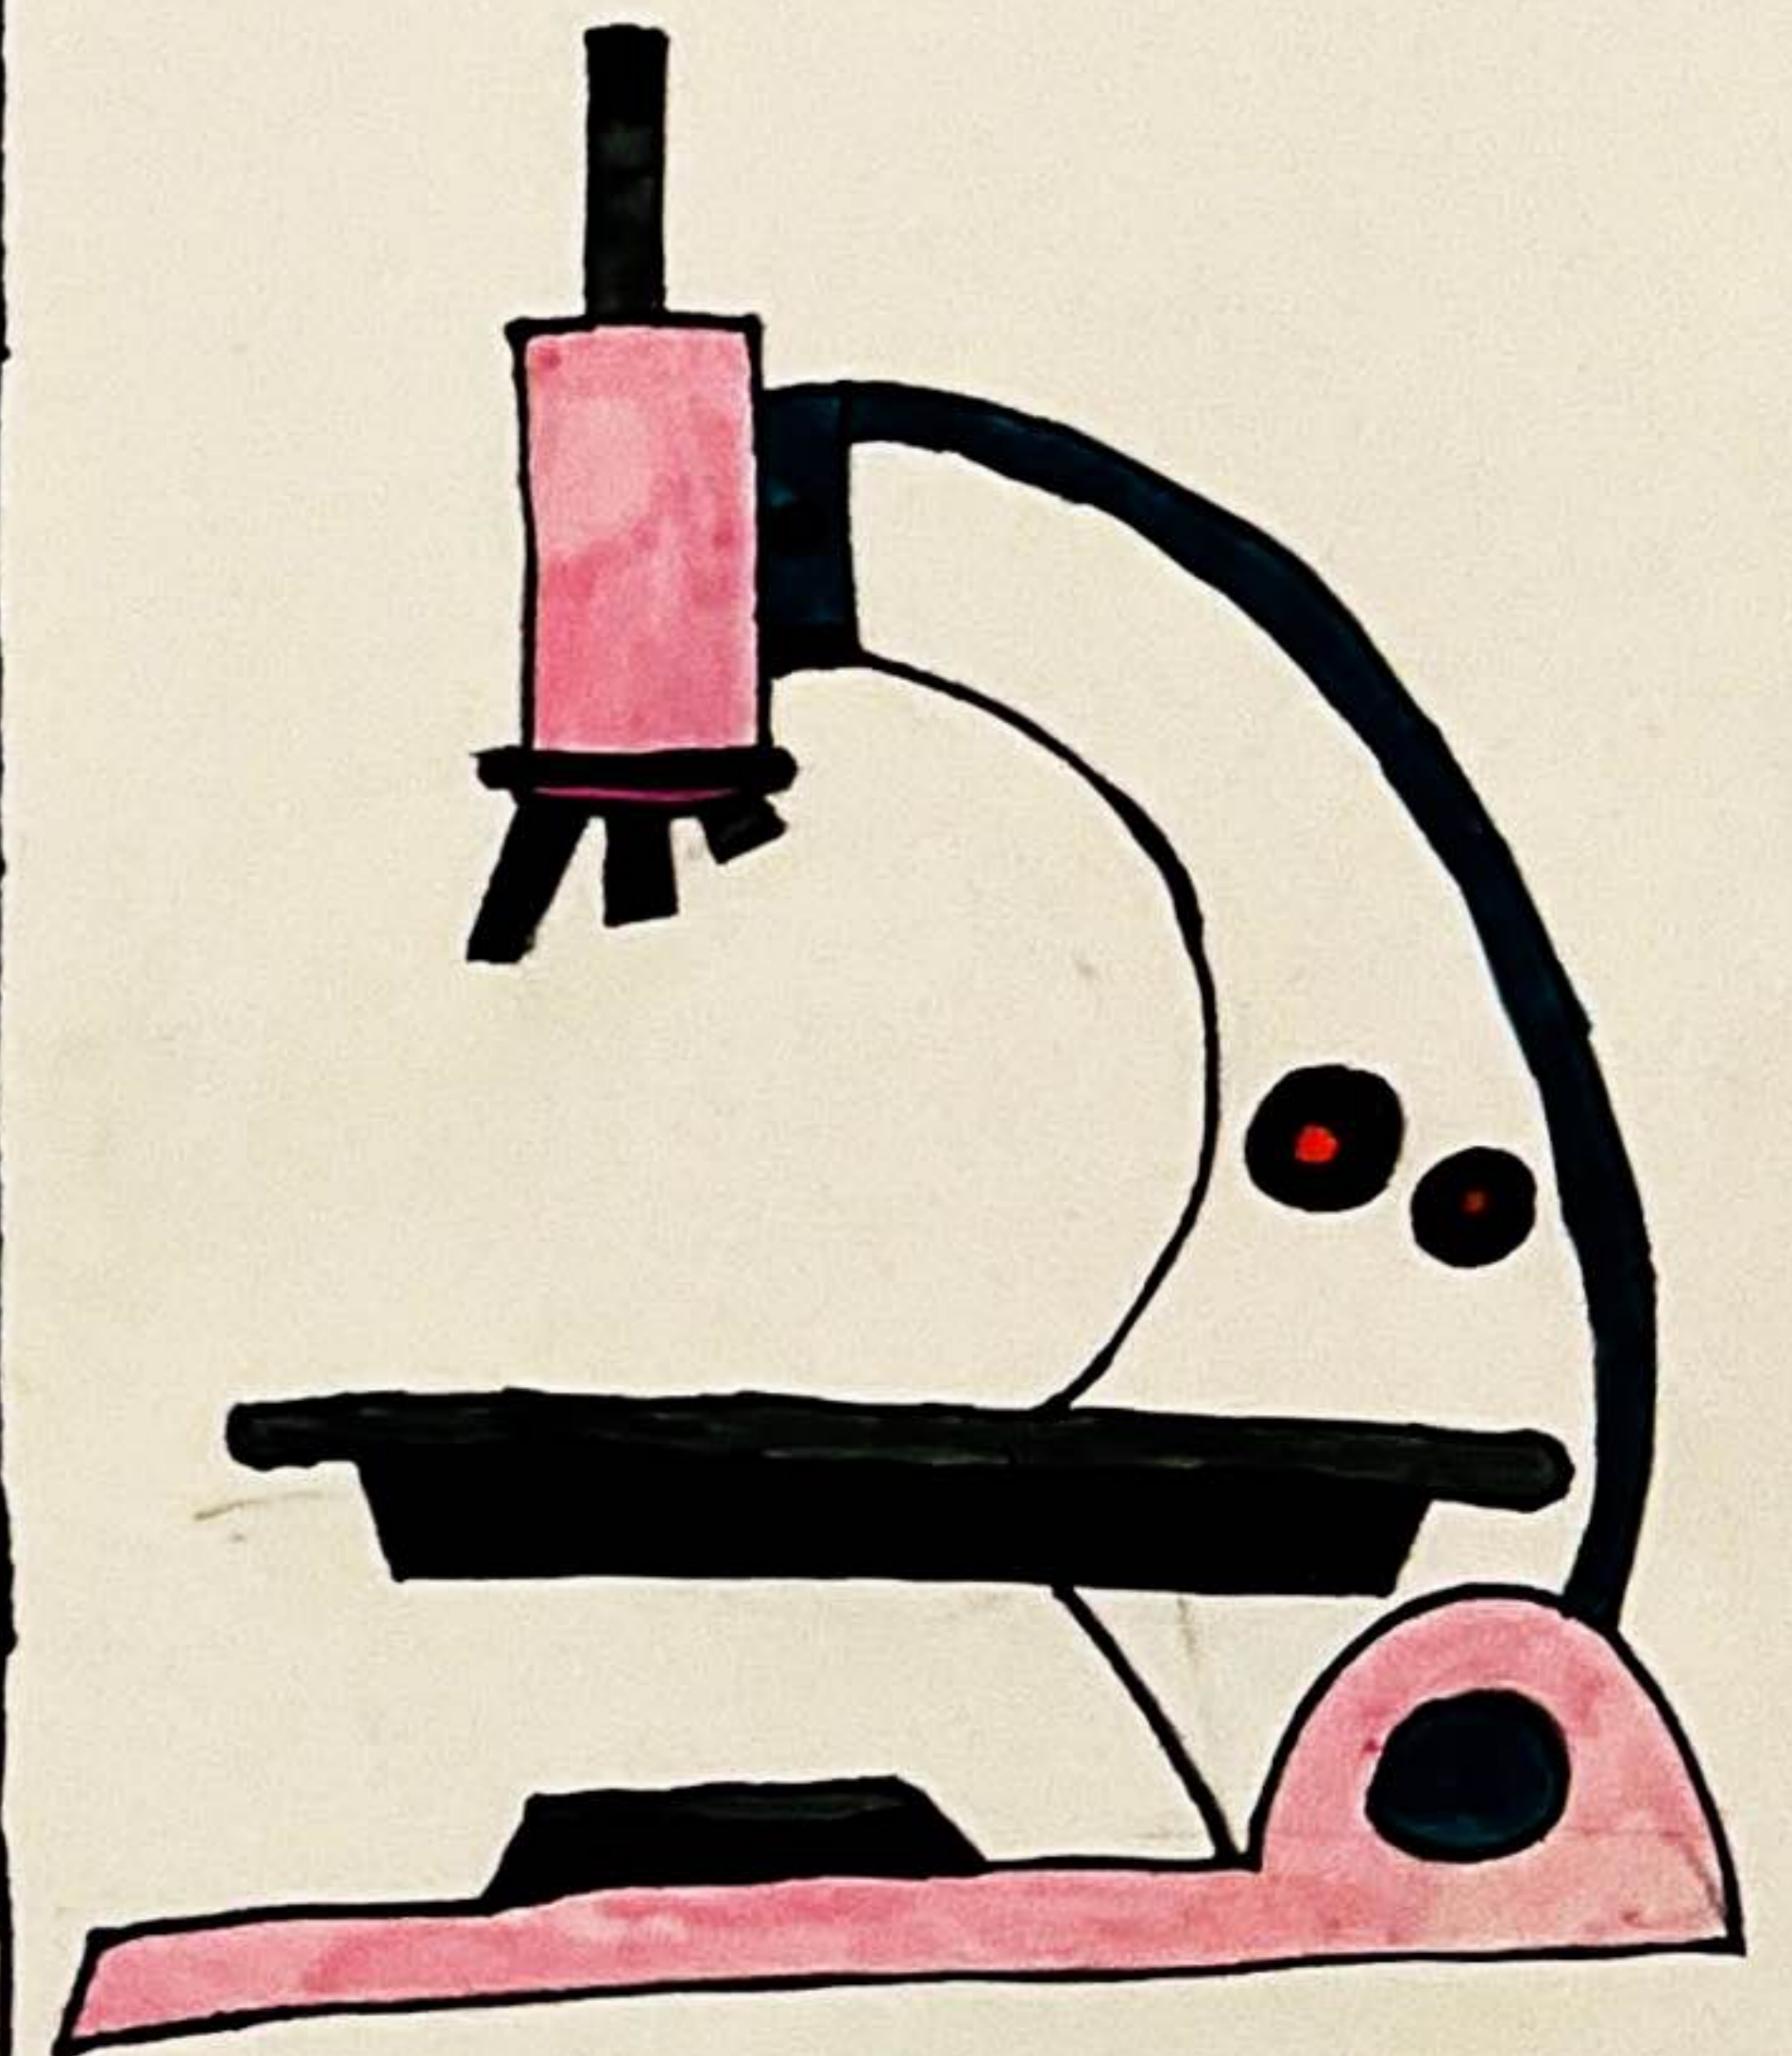

Research chemists study how chemicals interact with our bodies. They work on developing new medicines and treatments for diseases, and advance healthcare to find new solutions to health problems.

Geneticist

Cytotechnologist

Cytotechnologists are laboratory professionals who examine cellular samples to check for signs of diseases like cancer. They use powerful microscopes to check for abnormal cells.
